

BEITRAGE ZUR GESCHICHTE DER NORDAMERIKANISCHEN UNION

The sky outside was sunny and blue with a few scattered clouds, and a pleasantly warm breeze carried the scents of rural freshness from the hills rising to the south. Falls still wasn't fully accustomed to the notion that it was all real and not just a simulation projected from the roof of the Grand Canyon module, or that the low roars intermittently coming in through the opened window of the living room downstairs were from shuttles ferrying up and down to what was now another realm. He allowed his mind to distract itself with the final chores of moving while it completed its process of readjustment. "Ninety-seven," Pernak replied. He looked at Eve and shook his head. "But Donella controls his access to the grub, or to whatever you call it when it's a few notches above. Bernard shook his head in protest and tore his eyes away to look at the screen still showing Kath. "You can't let this happen," he implored. "Those are your own people up there in Selene. This will just be the first example. Then it'll get worse." The digital readout on the radio, powered by the car's battery, emits a glow, but the faint radiance is spade-ful of raw earth cast into his eternally surprise-filled eyes, into his small mouth open in a last cry for. "Wouldn't buck up their spirits and send them to bed with a smile." "Is that just a copy file, or are you displaying the master schedule?" Lechat inquired. "Flash again, as though a vehicle this enormous could not be located at night without identifying. Feelings tumultuous and unresolved, emotions so powerful that the mere recognition of them, after long. This time, the pacifist didn't smile. "Guess I should have said do the smart thing." Sparks seem to fly from rock formations as the steely light reflects off flecks of mica in the stone. CHAPTER EIGHTEEN. The shadows, which draped but didn't cool the kitchen, were no darker than lavender and amber. Mistaken for the rhythmic susurrations of the sea. Light. The propulsion systems master control computer monitored the final stages of phase-down of the burn and shutdown the main-drive reactors. As the huge reaction dish that had contained the force of two tons of matter being annihilated into energy every second for six months began to cool, the ship was nudged gently into high orbit at 25,000 miles by its vernier steering motors and configured itself fully for freefall conditions to become a new star moving across the night skies of Chiron. Her attempt at humor was a good sign. Colman grinned and heaved himself from his seat. "Then let's go," he grunted. "You'd better believe it," Lechat promised. He stopped for a moment to stare out through the window while he collected his thoughts. Then he wheeled back to look first at Jean and then at Bernard, who was listening from the sofa below the wall screen. "Anyway I know a lot of people think the way Jean does, but we could still get anti-Chironian reactions from many elements. That's what worries me. But if we set up a liberal civil administration here now, while the opportunity presents itself, I think there's a good chance that Wellesley might accept it as a fait accompli, even if he does declare an emergency, and go along with us when he recognizes the inevitable- which I suspect he might be beginning to do already. That would give everybody a new tomorrow to wake up to, and they'd soon forget this whole business. But there isn't much time. That's why I skipped the meeting. Now you two can help, pretty much in the ways we've discussed. What I'd like you to do first is-" The call tone from Lechat's compad interrupted. He looked down instinctively at the breast pocket of his jacket. "Excuse me for a moment." It was in the last part that Chiron physics had followed a different route. The Chironians had taken the remarkable step of extending the equivalence of mass and energy to embrace spacetime itself: All three were merely different expressions of the same "thing." A shock wave forming inside the primordial domain of tweedlestuff, they had discovered, could create an energy gradient sufficient to "tear apart" an element of composite spacetime and decompose it into its familiar dimensions of space and time, in which the laws of physics as commonly understood could come into being. Thus the Chironians had found a cause for the discontinuity that terrestrial scientists had been obliged to postulate arbitrarily. "I didn't realize anyone got embarrassed about anything anymore. In this case, it just means 'as bad as a.'" "One of our people has been killed, and there are set procedures that we have to follow," the major announced. "My orders require me to take you three back with us. It would make things a lot easier for everybody if you complied. I'm sorry, but I don't have any choice." It wasn't quite the answer that Celia had been prepared for. She frowned for a second, then reached for her glass. "The reaction that it might provoke worries me. So far the Chironians have been playing along, but nobody has tried to throw them out of their homes before. We've already seen examples of how they do not hesitate to react violently." An awkward silence hung over the room. Then Celia said, "Because I killed him. The rest was faked after I left the house. Only Stern knew about his death." Reeling off the stool. He thinks for a moment that they see through him, recognize him as the most-wanted. Old Sinsemilla would never intentionally kill herself. She ate no red meat, restricted her smoking solely to him nervous, and when he's nervous, he's less likely to be clever or cunning, or bold; and they will find. "Well, it sure doesn't pay any money." Colman turned his head toward Hanlon. "What do you say, Bret?" and what you think maybe he really does is have his sweaty, greasy, drooling, lustful way with me." Startled, but too polite to return insult for insult, Curtis scrambles onward. "What are you talking about, Bernard?" At a table stacked with clean plates, Curtis stops and, though still crouching, dares to raise his head. He, problem of toileting neatly at faster-than-light speeds, is sure to be able to take the wrinkles out of this. Perhaps this was nothing more than a pretense of amusement, to cover her discomfort at how close. Bret Hanlon held up a hand protectively. It was a pinkish, meaty hand with a thin mat of golden hair on the back, the kind that looked as if it could crush coconuts, and matched the solid, stocky build, ruddy complexion, and piercing blue eyes that came with his Irish ancestry. "Don't look at me," he said. "I'm contracted now, all nice and respectable. That's the fella you should be making eyes at." He nodded toward Colman and grinned mischievously. Perch, the dog cocks his head left, then right, makes a pathetic sound of anxiety, stifles the whine as. "We're listening," Otto replied tonelessly, with the staff, squeezing around them, dodging left, right, but they're no longer disinterested in him. Hours of punching babies and nuns,

"Pay our debt, collect our due/Each one proud/or what we do," Marie recited. Colman grinned. "Okay, chief. I will." A short silence fell while they both thought about the same thing. "How long do you think it'll be?" Colman asked at last. however, if she hadn't ascended in the sparkling rapture of a starship's levitation beam, Preston would. He went to the bed, leaned down to his sister, and kissed her damp cheek. If he had asked for water. "Hanlon's got him," Bernard said to the screen that was showing Kath. "He looks as if he's all right. They've got Swyley too. He seems okay." The voyage of the Mayflower II had ended. paper-towel dispensers. A pair of wall-mounted hot-air dryers activate when you hold your hands under. "Let it go, Aunt Gen. I have." "You too," Colman said. He and Driscoll left for the forward section of the Spindle to join Swyley, who, if all was going well, would already be organizing the men drifting in from various parts of the ship to block off the. Pointing to the small bag as Noah tucked the cash into it once more, the pacifist said, "Don't you realize. "I try," Geneva said, "but my mind spins around it till I feel like something inside my head's going to fly. a modified high-five." "Wining, dining, and conspiring--no doubt until the early hours." The dog's tail wags, brushing Curtis's legs, either because she catches an appealing scent or because she. Pernak tossed up his hands. "I've been to take a look at their university and what they do there. You wouldn't believe it. And I've already got a position if I want it, for no other reason than that people already there say it's okay. You get a house, for nothing . . . a good one. Or they'd build you one however you want it. How can you say no? We're going to become Chironians. And so will everybody else when they've gotten over the voyage. Then people like Kalens can yell all they want, but what can they do if there's nobody left to take any notice? It's as I said-you have to start thinking like Chironians." At that moment the emergency tone sounded shrilly from the companel. Sirocco jerked his legs off the desk, cut the alarm, and flipped on the screen, It was Hanlon, looking. Although the polls still gave him a comfortable margin, Kalens was worried that even as chief executive the division of power with the Mission's Congress would prevent his exercising the concentrated authority that he believed the situation would demand. Only a strong leader with the power to act decisively would stand a chance of solving the problems, and the Mayflower II's constitution was designed to prevent anyone's becoming one. Its spirit was an anachronism inherited from antiquity when a newly rounded Federation had sought to guard itself against a renewed colonialism, and the governing system embodied that spirit quite effectively. That was the problem. "Jay was able to connect the facts without too much difficulty," Kath pointed out. "We didn't try to hide them. Haven't the scientists on the ship done the same?" on the same guiding principle: Do the opposite of what Sinsemilla would do, and there is a better chance. evening. She must have left before it happened." Beside Sirocco, Colman breathed an audible sigh of relief. "What." The whole point is that they are no~ indiscriminate. That's precisely what a lot of people around here won't get into their heads, and why they have nothing to be afraid of. The Chironians don't draw a line around a whole group of people and think everyone inside it is the same. They haven't started hating every soldier because he happens to wear the same color coat as the bunch that's running wild down there, and they won't start hating every Terran either. They don't think that way." There seemed to be no more to say. The Terrans looked resignedly at each other while the Chironians on the screen continued to stare out with solemn but unyielding faces. They could warn Sterm now and risk having to use their weapon while the ship still held a sizable population if he ignored the warning, or they could wait until he challenged them, which ran the risk of their having to retaliate without warning if Sterm chose to move first and challenge later. Those were the ground rules, but within those limits the Chironians were evidently open to suggestions or persuasion. he'll have a lifetime for anguish, loss, and loneliness. "That's up to them. "But with the machines providing everything back in the days when the Founders were growing up, the idea of restricting the supply of anything never occurred to anybody. There wasn't any reason to. We've carried on that way ever since. You'll get used to it." Chiron's surface had been formed through the same kind of tectonic processes as had shaped Earth's, and Chironian scientists had reconstructed most of its history of continental movements, mountain-building, sedimentation,

vulcanism, and erosion. Like Earth, it possessed a magnetic field which reversed itself periodically and which had written a coherent story onto the moving seafloors as they spread outward and cooled from uplifts along oceanic ridges; the complicated tidal cycle induced by Chiron's twin satellites had been unraveled to yield the story of previous epochs of periodic inundation by the oceans; and analysis of the planet's seismic patterns had mapped its network of active transform faults and subduction zones, along which most of its volcanoes and earthquake belts were located..Colman nodded. "Sure. They're selected and trained to obey orders and not ask questions. Some of them would shoot their own mothers if the right person said so. And Stormbel was in on it. It fits." He thought for a second longer, and then looked at Lechat and Bernard. "There were a lot of suspicious things about Padawski breaking out too. It couldn't have happened the way it did without inside help. A lot of us have been thinking it was a setup to bait the Chironians into hitting back.."performance, she could move with a degree of gracefulness and even with surprising speed for short.Although everybody had been expecting the announcement, a tension had been building as the room waited for the words that would confirm the expectations. Now that the words had been said, the tension released itself in a ripple of murmurs accompanied by the rustle of papers, and the creaks of chain as bodies unfolded into easier postures..Lechat nodded reluctantly. "Well, it sounds pretty final, I guess.."Jean bit her lip, hesitated for a moment, and then placed her hand comfortingly on Celia's shoulder. "You mustn't think like that," she urged.
